

STEAM SEAL 2.0

Introducing the Steam Seal 2.0, your ultimate solution for superior steam production! Crafted with CPP's proprietary high-temperature material, this revolutionary seal is engineered to thrive under the most extreme conditions. With its unmatched durability, Steam Seal 2.0 endures intense heat, relentless pressure, and prolonged production cycles, ensuring peak performance and reliability.

Steam Seal 2.0 is the first of its kind, featuring pressure-activated sealing technology. This innovation significantly reduces the need for manual adjustments of seals during heating and cooling cycles, ultimately saving considerable man-hours. Its particularly useful in applications involving slim hole stuffing boxes where alignment can be controlled effectively. By utilizing this pressure-activated design, operational efficiency and maintenance efforts are notably improved, making it a valuable addition to your sealing solutions.

Temperature Rating	-446°F (-290°C) / 662°F (350°C)
Abrasion Resistance	Medium to Moderate
H2S	30%
CO2	15%
Max Pressure	10,000 PSI
