

HSN Cone Packing- GENERAL SERVICE

HSN Cone Packing offers superior performance compared to conventional soft rubber and Teflon-filled materials. In general service, standard packing often becomes blistered or fatigued due to exposure to production byproducts.

The HSN elastomer formulation provides increased chemical resistance, making it more suitable for environments with aggressive hydrocarbons. Additionally, its abrasion resistance exceeds that of most general-purpose rubber blends.

This durability results in extended service life, particularly in conditions where lubrication is limited and hydrocarbon concentrations are elevated. HSN is a reliable choice for improving longevity and performance in challenging operational settings.

Temp	165°C (329°F)
Max Pressure	2,500 PSI
H2S	10%
CO2	20%
Abrasive Resistance	Moderate
