

Super Orange - Specialty Service

Super Orange Packings: The Ultimate Wellhead Solution for All Seasons

CPP's Super Orange packings are engineered for peak performance in tough wellhead environments. **Super Orange Cone Packing** provides unmatched compression set, creating strong seals without reducing packing life. Its hydrocarbon-resistant polymer is inert to CO₂ and H₂S, allowing for longer, faster, and dryer pumping with fewer failures. **Vanilla Cone Packing** delivers all-season performance, maintaining seal integrity through rapid temperature changes and reducing emissions with its self-lubricating design.

Super Orange Vee Packing offers excellent flexibility and sealing under pressure, with center rings ensuring tight seals in low-emission or high-pressure settings.

Super Orange Donut Packing excels in abrasion resistance, chemical tolerance, and thermal stability. With full Teflon Infusion throughout, it eliminates wear rings and provides long-lasting, low-maintenance performance. These four solutions deliver reliable sealing, longer run times, and lower overall operating costs.
