

RNE Wrap

ENGINEERED FOR SAFETY & EFFICIENCY IN THE FIELD

The RNE Wrap was developed to address a critical safety concern identified during independent audits at two leading oilfield service companies: accidental contact with hot equipment housings that can cause serious burns.

In response, we engineered a durable, easy-to-install thermal barrier that helps protect field personnel from heat exposure while supporting operational efficiency.

Key Features & Benefits

Engineered for Efficiency

Quick to install and remove—saving time and labor on-site.

Versatile Application

Fits most drilling and well service boiler systems.

Built to Last

Waterproof, mold-resistant, and designed for long-term use in harsh environments.

Cost-Saving Performance

Retains steam longer, reducing energy loss and lowering fuel costs.

Critical for Safety

Provides a protective shield against hot surfaces, helping prevent injuries

Customizable to Your Needs

Available in all sizes, custom colors, and labeled to meet your

Comprehensive Coverage

Designed to fit elbows, tees, valves, unions, boiler lines, and flanges
