

VANILLA CONE - SPECIALTY SERVICE

The Vanilla Cone Packing is built using patented polymer technology, offering reliable compression sets specifically designed for challenging environments—including arctic conditions. While conventional elastomers often struggle with rapid temperature swings during spring and fall, our advanced formulation delivers consistent sealing without the need for constant adjustments.

What sets this packing apart is its unique balance: it's softer and more adaptable than traditional materials, yet remains chemically inert—resisting harsh fluids without compromising performance. Our polymer engineers have developed a self-lubricating compound that, unlike most Teflon-impregnated materials, adapts to thermal fluctuations while minimizing the risk of leaks and emissions that typically emerge with seasonal or nighttime temperature drops.

If you're looking for a reliable, low-maintenance seal that performs under pressure—without the hassle—Vanilla Cone Packing offers a softer serve, without the soft results.

Temp	125°C (257°F)
Max Pressure	5,000 PSI
H2S	INERT
CO2	INERT
Abrasive Resistance	Low-Moderate
